

AA37

The Canyon AeroConnect AA37 Aural Warning Generator

Canyon's Aircraft Aural Warning Generators (AWG) are vital components in mission critical communications, offering storage and playback of virtually any audible signal upon activation by a control signal. Users may choose from a pre-set sound library or define their own custom warning set. These AWGs seamlessly integrate with aircraft audio systems and are in service on helicopters, fixed-wing military trainers, business jets, regional jets, and transport aircraft, ensuring clear and reliable communication during every mission.

FEATURES

- 16-number storage
- Parallel handset operation
- Field-adaptable settings: mic, sidetone, DTMF, ringer output levels
- Backlighting adjustable
- Interfaces with Globalstar, Iridium and Inmarsat
- Interfaces with airborne cellular systems
